

Lab 1 – Requirements Table: PES2UG24CS493 – Freelance Content Creator Escrow Platform

Domain: Media, Events & Community | Target Actors: Content Creator, Client, Sponsor

NAME: SHREYASH M YADWAD

SRN: PES2UG24CS493

SEC: H

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system shall allow a Client to create an escrow contract for a project, specifying scope, milestones, and payment amount.	High	When a Client submits contract details with at least one milestone and an amount greater than 0, the system creates the contract and displays a unique Contract ID within 3 seconds.	Establishes the core agreement that anchors the escrow relationship between the Client and Content Creator.	<i>Clarify what happens if scope or milestones are edited after the contract is created — is versioning or Client/Creator re-approval needed?</i>
FR-002	Functional	The system shall allow a Client to deposit funds into escrow for an active contract using a supported payment method.	High	After successful payment authorization, the contract's escrow balance updates to reflect the deposited amount and a "Funded" status is shown within 5 seconds.	Funds must be secured in escrow before creative work begins, protecting both Client and Content Creator.	<i>Specify which payment methods are supported (card, UPI, wallet) and how partial or multiple deposits toward the same milestone are handled.</i>
FR-003	Functional	The system shall allow a Content Creator to submit a deliverable (file or link) against a specific contract milestone.	High	Upon submission, the milestone status changes to "Submitted - Pending Review" and the Client receives a notification within 1 minute.	Enables creators to formally hand off completed work for evaluation and payment release.	<i>Add constraints on deliverable submission — max file size, allowed file types, or accepted link domains.</i>
FR-004	Functional	The system shall allow a Client to approve or reject a submitted deliverable within a configurable review period (default 5 business days).	High	A Client action of "Approve" or "Reject" updates the milestone status accordingly and is time-stamped in the audit log within the review period.	Gives Clients formal control over deliverable quality while creating an auditable review trail.	<i>Define the system's behavior if the Client neither approves nor rejects within the review period — does it auto-approve or escalate?</i>

FR-005	Functional	The system shall allow a Sponsor to cofund a Client's project by contributing a specified amount to the project's escrow balance.	Medium	When a Sponsor confirms a contribution, the project's total escrow balance increases by the contributed amount and the Sponsor's name appears in the project's funding list within 5 seconds.	Supports community/sponsorbacked content creation, a key differentiator of the platform.	<i>Clarify whether a Sponsor's identity is always public in the funding list or can be contributed anonymously.</i>
NFR-001	Nonfunctional	The system shall process any escrow deposit, release, or withdrawal transaction within 5 seconds under normal load (up to 500 concurrent users).	High	Load testing with 500 concurrent simulated transactions shows a 95thpercentile transaction time of less than 5 seconds.	Ensures a responsive experience for time-sensitive financial actions during peak usage.	<i>Confirm the 5-second target also holds for write-heavy actions like payment release, not just deposits, since release involves an external gateway call.</i>
NFR-002	Nonfunctional	The system shall encrypt all financial and personal data, both in transit and at rest, using industry-standard encryption (TLS 1.2+ and AES-256).	High	A security scan confirms all API endpoints enforce TLS 1.2+ and database inspection confirms AES-256 encryption at rest for all PII and payment fields.	Protects sensitive financial and personal data, essential for user trust and regulatory compliance.	<i>Specify the key rotation policy and whether PCI-DSS compliance is required given third-party payment gateway integration.</i>
